Recently we have got migrated our amarujala.com website from Net-Magic cloud setup to Sify cloud setup. So, now the CMS access is via Sify MPLS as well as over Internet. To be able to access the new CMS portal using Sify MPLS.

You are requested to go through the below document and do the required changes at your respective locations for all users (Digital Content Team) who access CMS portal. After doing these changes, they won't be able to access CMS using internet. In case they wish to access it through Internet then host file entry has to be removed.

1. Check Firefox version and verify if it is version 17. If not then update it accordingly. Inform user to use only Firefox version 17.
2. Check default gateway of the system, it has to be Core switch gateway IP at Noida (HO) and at Unit locations it has to be 10.59.x.3, where x represents Unit IP subnet.
3. Create host file entry on user machine with below
    a. 172.29.18.4 cms.amarujala.com
4. Open proxy settings on user system browser and add below subnet in proxy bypass list.
    a. 172.29.*.*
5. Test your settings by two menthods
    a. Open command prompt and ping cms.amarujala.com. It should get resolved to 172.29.18.4
    b. Open browser and test cms.amarujala.com and below webpage should open.
