2. DOCUMENT OVERVIEW

2.1 Scope

This document will cover all the steps require to connect/disconnect the network drive.

2.2 Purpose

Users\Officers able to map shared drive.

2.3 Prerequisites

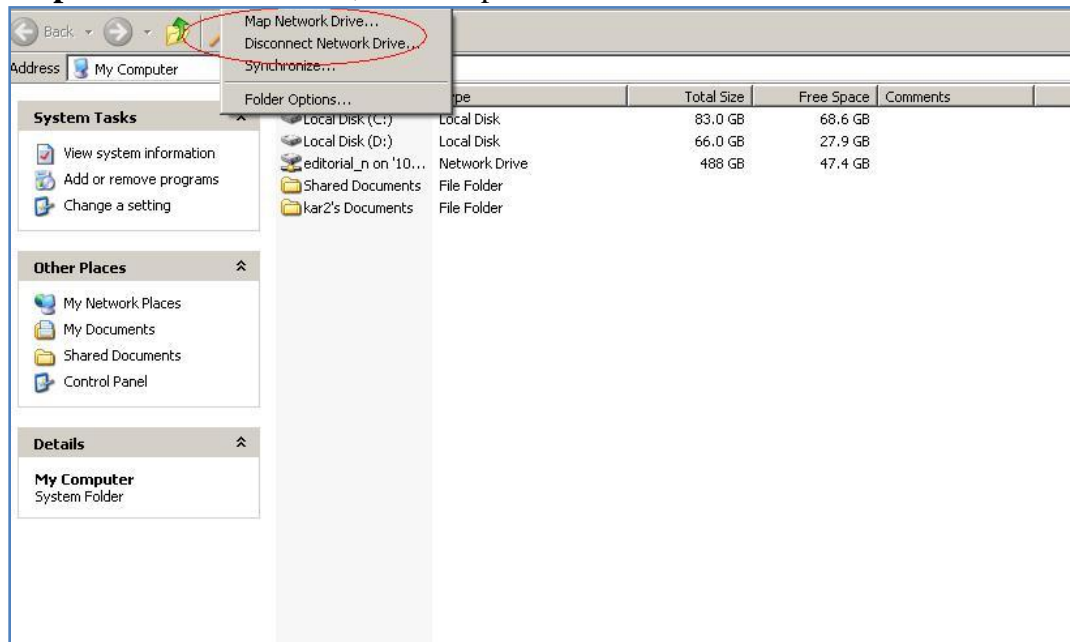

No prerequisites required for this.

3. PPROCEDURES

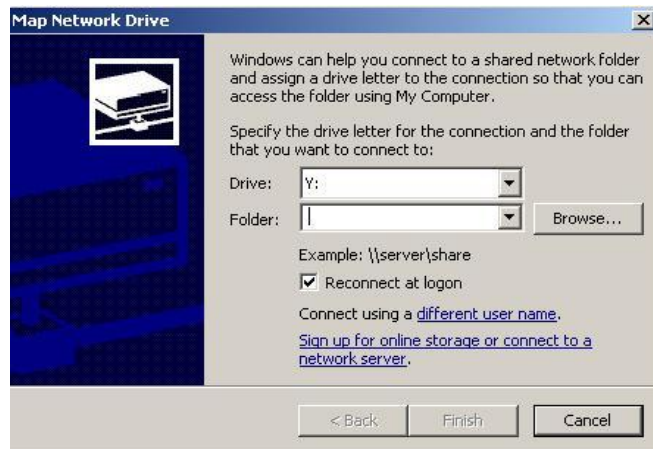

Process for Drive Mapping:

Step1 Open the my Computer

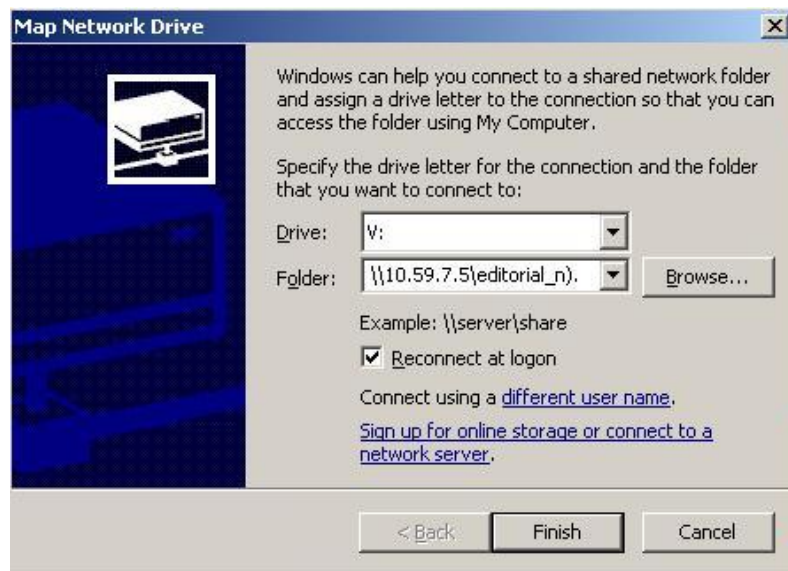

Step2 On the Tools menu, click Map Network Drive.

Step3 A new Map Network Drive window will be open.

Step4 in the Map Network Drive window, choose an available drive letter from the dropdown list located next to the "Drive:" option. Any drives already mapped will have a shared folder name displayed inside the dropdown list.

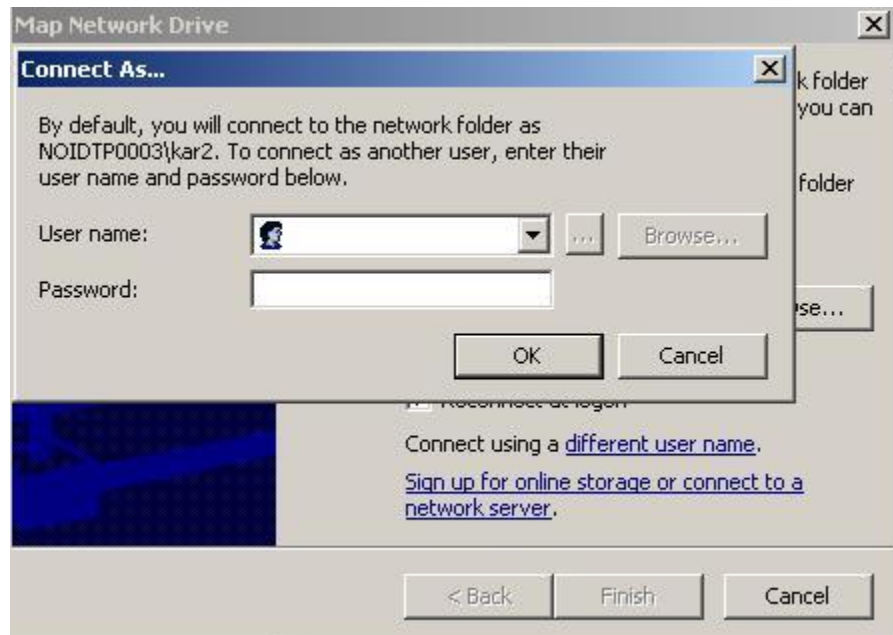

Step5 In the Folder box, type the path for the server and shared resource (in the following format: \\server name or IP\share name e.g. \\10.59.7.5\editorial_n). You can also click Browse to find the computer and shared resource.

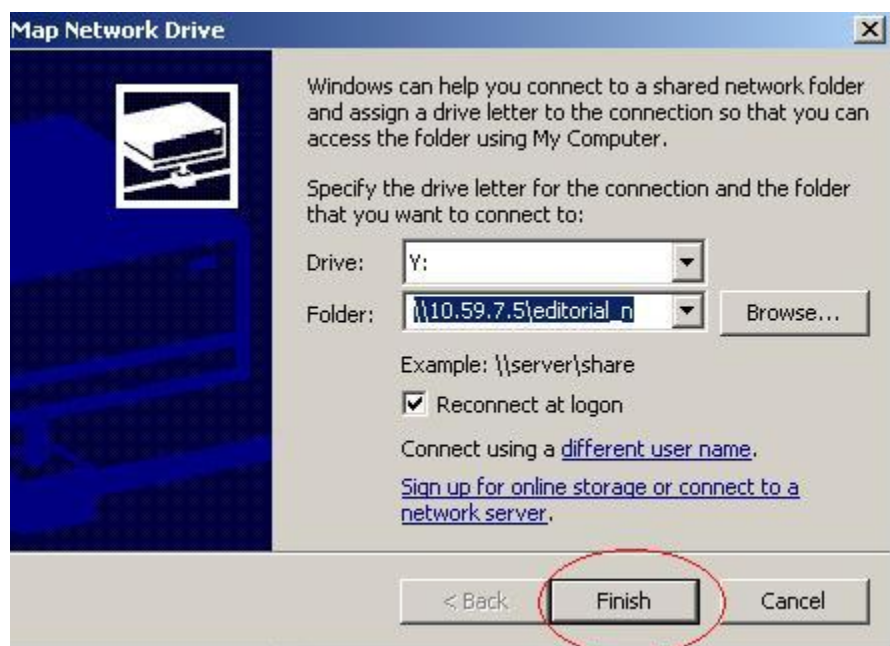

Step6 Click the "Reconnect at login" checkbox if this network drive should be mapped permanently. Otherwise, this drive will un-map when the user logs out of this computer.

Step7 If the remote computer that contains the shared folder requires a different username and password to log in, click the "different user name" hyperlink to enter this information.

Step8 Click on Finish.

Step9 If the drive letter was previously mapped to a different location, a message box will appear asking to replace the current connection with the new one. Click Yes to disconnect and un-map the old mapped drive.

Step10 if the Finish operation succeeds, the network drive will be mapped. If the network drive cannot be mapped, ensure the folder name is spelled correctly, that this folder was correctly set up for sharing on the remote computer, that (if necessary) the correct username and password have been entered, and that the computer network connections are functioning properly.

Process for disconnect the mapped drive:

1. Open My Computer.
2. Right-click the icon for the mapped drive and choose Disconnect.

Note: You can also go to the Tools menu choose Disconnect Network Drive. This will display a list of the drives that may be disconnected.

5. REFERENCES:

After that check, if the same has been configure successfully

If not, feel free to contact IT Helpdesk in case of any technical issue
