

Dear All,

It gives us a great pleasure to inform that we have completed Managed switches installation at all the group printing locations. With the completion of this project, we have now achieved partial management at switch level. We can now manage network devices remotely and monitor for errors. We have introduced one important feature called storm-control on all switches. By enabling this feature we have reduced chances of network going down to a great extent. This feature would help restrict the network outage to particular area or dept which erstwhile would have affected the entire network of any location.

At corporate office we have also introduced VLAN segmentation which helps resolves network slowdown and enhances security. These changes also help us diagnose network issue faster and we can identify the root cause which was impossible to be traced out earlier.
